

New Products

The Stage loudspeaker, from **Martin-Logan**, is a hybrid electrostatic loudspeaker featuring precision performance crossover engineering, high-resolution aluminum cone woofers, and HD-XStat and XStat Technology. Specifications include 4° impedance, 30° horizontal dispersion, 250W per channel power handling, and custom binding posts. For more information, visit www.martinlogan.com.

The M3 Silicon Valve solid-state microphone, from **MXL Microphones**, is a large diaphragm, pressure-gradient condenser mike. The M3 does not require an external power supply, and does not waste time warming up like tube microphones. There is another version, the M3-P, voiced specifically for female vocals. For additional information, see www.mxlms.com.

Impact Acoustics introduced a new line of SonicWave Pro-Audio Cables, featuring gold-plated pins, textured grip, and precise soldering techniques that eliminate the negative effects of dissimilar metals. The coaxial audio cables feature 75Ω geometry and oxygen free conductors. There are also twisted pair, shielded audio cables, which are available in XLR male to female and ¼" TRS male to male. You can find these at www.impactacoustics.com.

Equi=Tech announced the Model 20WQ Wall Cabinet System with twice the power of its smaller versions in the same amount of space. With a 200A capacity and room for 20 circuits for hard wiring, the 20WQ features the Q type transformer that keeps current and voltage accurately in phase. The 20WQ also contains a lower cabinet which houses the toroid transformer that drives the system, and there is additional EMI/RFI filtering available. To learn more, go to www.equitech.com.

The InstaSnake, from **Energy Transformation Systems, Inc.**, consists of two small boxes with four XLR microphone inputs and a shielded RJ45 jack. It accepts mike line level, analog or digital audio, and supports phantom power. For more information, contact tkayne@etslan.com or visit www.etslan.com.

New from **TDL Technology** is the Model 444 Stereo Headphone Amplifier, featuring wide bandwidth, low noise, and DC operated balance and volume.

Minimizing unwanted signal pickup, the 444 works with virtually all types of headphones. The 444 has flat frequency response, comes with a 24V DC wall power supply, and has 47k input resistance for each stereo channel. Learn more at www.tdl-tech.com.

The TA-500, a three-way, full-range enclosure from **Turbosound**, provides wider dispersion characteristics. Initially available in a fixed install/ground stacked variant, the TA-500 is another in the Aspect product range. To find out more, please go to www.turbosound.com.

Danley Sound Labs introduced the SH-100B loudspeaker, with frequency response to below 40Hz and maximum SPL in the upper 120dB range. Compact at 29.5" x 20.5" x 19", the SH-100B is highly mobile and can be used in houses of worship, performing arts centers, live music venues, and more. Visit www.danleysoundlabs.com for more information. *aX*
