Pass Labs is pleased to announce that Texas Instruments has purchased a non-exclusive license to US patent #5,376,899. The amplifier topology, marketed by Pass under the tradename "SuperSymmetry" provides a means of achieving high performance with balanced symmetric feedback and minimal gain stages.

SuperSymmetry has been the basis for amplifiers marketed by Pass since the 1998 introduction of the X-1000, a 1000W power amplifier using only two gain stages—differential input transistors driving complementary power output transistors.

"The beauty of the design lies in the combination of power and simplicity. We believe that the highest quality sound is achieved with a simple gain path, and SuperSymmetry gives us high performance with minimal complexity and negative feedback," says inventor Nelson Pass.

Yard Sale

WANTED

I have LOUDSPEAKER Version 5 by Max Knittel. Does anybody have Version 6 that they are not using and willing to give or sell to me at a reasonable price? Thanks, Angel Rivera e-mail speakerman@excite.com.

FOR SALE

seas Loki Speaker Kit

Madisound and Seas are pleased to offer the Loki kit. This small magnetically shielded system is the perfect choice for many applications. The Loki, with its coincidentally mounted tweeter, sounds fantastic from any position in your listening room.

The Loki uses an 18cm Seas coaxial speaker. The tweeter is mounted at the base of the woofer cone, coincidental with the woofer voice coil. This type of mounting allows you to hear the woofer and the tweeter at the same "time" and from any direction, nearly eliminating the confines of a "sweet spot". This configuration also allows you to use the speaker on its side without any change in sound.

Cabinets are available in Maple, Natural Cherry, and Black Painted Ash. The cabinet dimensions are 8" wide by 15" tall by 11" deep. The cabinets are constructed from 3/4" MDF with a 1" MDF front baffle. The cabinets are veneered with real wood on all sides. Cabinets are fully assembled.

Crossover are constructed from air coil inductors, polypropylene film capacitors and film resistors.

Frequency response is from 46Hz to 25kHz, with an average efficiency of 88db. The speaker impedance is 8 ohm.

Consider the Loki all the way around in your home theater system; as book shelf speakers; or as computer monitors.

Price Each \$225.00
